RE: Request for Ozempic (semaglutide)

Indication: Type 2 Diabetes Mellitus (ICD-10: E11.69)

Requested Dose: [BLANK] | Frequency: once weekly

Dear Reviewer,

I am writing to request prior authorization for Ozempic for Lior Gallant (fictional), a 17-year-old patient under my care for type 2 diabetes.

Liam was initiated on metformin 1000 mg PO BID on 02/10/2026 with baseline HbA1c of 9.4%. After 4 months of compliant therapy, repeat HbA1c on 06/15/2026 decreased to 6.7%. However, due to recent erratic fasting glucose levels and concern for weight gain, we are requesting Ozempic.

Most recent clinic HbA1c was collected on 07/28/2026 (see clinic note).

Sincerely,

Dr. Evelyn Reed, MD (fictional).

CLINIC PROGRESS NOTE - ENDOCRINOLOGY
Patient: Lior Gallant (fictional) | Age: 17 | MRN: XXXXXXXX
Date of Visit: 07/28/2026 | Provider: Dr. Evelyn Reed, MD (fictional)

DIAGNOSIS: Type 2 diabetes mellitus without acute complications (E11.9).
HISTORY OF PRESENT ILLNESS:
17yo male with established type 2 diabetes mellitus returns for follow-up.
Patient completed 4-month course of metformin 1000 mg BID (02/10/2026 to 06/15/2026). Baseline A1c was 9.4% (02/05/2026). Follow-up A1c was 6.7% on 06/15/2026, achieving goal. Metformin was discontinued due to patient preference. Fasting blood glucoses have since rebounded.
LAB RESULTS - IN-CLINIC TESTING (07/28/2026):
HbA1c was initially transcribed as 8.9%, corrected to 8.4% per repeat run.
Result: Hemoglobin A1c 8.4% (Collected: 07/28/2026).
Glucose: 168 mg/dL.
MEDICATION ORDER:
Drug: Semaglutide (Ozempic) | Sig: SubQ weekly | Dispense: 1 pen
Note: Dose field left blank pending insurance approval and titration plan.

Addendum: Dr. Evelyn Reed, MD (fictional) 07/28/2026 16:15 - A1c transcription corrected in laboratory interface; verified 8.4%.
