LAKESIDE CLINICAL DERMATOLOGY (fictional) | LETTER OF MEDICAL NECESSITY

DATE: 11/10/2026 | TO: Prior Authorization Department | FAX: XXXXXXXXXX

PATIENT: Gregory Vance (fictional) | DOB: XX/XX/XXXX (Age: 39)

MEMBER ID: XXXXXXXX | PRESCRIBER: Dr. Allison Hayes, MD (fictional)

RE: Prior Authorization for Humira (adalimumab)

Indication: Moderate-to-severe plaque psoriasis (ICD-10 L40.0)

Requested Regimen: Adalimumab 80 mg SQ every 2 weeks

Dear Reviewer,

I am requesting coverage of Humira 80 mg every 2 weeks for Gregory Vance (fictional), a 39-year-old male with moderate-to-severe plaque psoriasis. The patient previously tried and failed methotrexate with inadequate response, but chart details regarding exact start dates and BSA scores from the outside clinic were unavailable at the time of transfer. Most recent clinical assessment documented body surface area of 12%.

Note to reviewer: Requesting higher maintenance dose of 80 mg due to BMI.

Sincerely,

Dr. Allison Hayes, MD (fictional) | NPI: XXXXXXXXXX

LAKESIDE CLINICAL DERMATOLOGY (fictional) | EHR PROGRESS NOTE & LABS
Patient: Gregory Vance (fictional) | Age: 39 | MRN: XXXXXXXX
Date: 11/10/2026 | Provider: Dr. Allison Hayes, MD (fictional)

ASSESSMENT: Moderate-to-severe plaque psoriasis, active flaring.
CLINICAL EVALUATION RECORD:

Evaluation Date	Parameter	Finding	Threshold
05/06/2026	Body Surface Area	12%	>= 10%
05/06/2026	Plaque Morphology	Thick	Scaling
11/10/2026	TB QuantiFERON Gold	Negative	Negative

MEDICATION TRIAL SUMMARY:
1. Methotrexate: Chart notes "failed methotrexate due to lack of efficacy".
   No specific dosage, baseline BSA, or follow-up BSA recorded.
2. Topical clobetasol 0.05% cream: Minimal temporary improvement.
PLAN:
Start adalimumab 80 mg subcutaneous injection every 2 weeks.
