LIPID REFERRAL
Written November 4 2026
Patient: Anya Corlen (fictional), age 57
From: Dr. Venn Solwick (fictional)
Please supply evolocumab for coronary artery disease with a stent.
The directions are 140 mg SC every 2 wks.
The patient continues lipid treatment while awaiting this decision.
Atorvastatin 20 mg QD began January 1 2026 and remains ongoing.
LDL before the first dose: 155 mg/dl on December 30 2025.
LDL during treatment: 112 mg/dl on April 15 2026.
Latest LDL-C: 104 mg/dL on October 27 2026.
No adverse effects were reported with the tablets.
Dietary changes were discussed.
Injection training is requested.
Signed: Venn Solwick (fictional)
